A new standard in adolescent personality assessment

The MMPI-A-RF® is the most up-to-date, empirically based personality assessment for use with adolescents. The test mirrors the structure of the MMPI-2-RF®, the most recent version for use with adults, and includes several adolescent-specific scales. The MMPI-A-RF is composed of 241 items, is linked to current models of psychopathology and personality, and features 48 empirically validated scales relevant for use with adolescents in a variety of clinical, forensic, and school settings.

Clinical, school, and counseling psychologists can use the MMPI-A-RF to help:
- Identify potential problems and possible root causes early
- Assess major manifestations of psychological dysfunction
- Support diagnosis and treatment planning in a variety of settings
- Make decisions for appropriate referrals
- Share information with parents, teachers, and others in the adolescent’s support network

“With outstanding psychometric properties, theoretically driven hierarchical organization, and clinically relevant scales, the MMPI-A-RF® is now the most comprehensive measure available for assessing and understanding adolescent emotional, interpersonal, and behavioral functioning and personality characteristics.”

— Hope Goldberg, PhD, ABPP-CN
Private Practitioner, Adult and Adolescent Clinical Neuropsychology
Pasadena, CA

Overview
