Advantages of Dr. Millon’s Theory

Rather than starting with statistical methodology, the MCMI-IV and all the Millon inventories begin with explanatory principles. This allows the clinician to grasp the how and why from the data, to truly understand the person behind the numbers. It blends together theory and statistics to form a cohesive understanding of a person’s personality.

Turbulent Scale—New!

Turbulent, MCMI-IV Scale 4B: Ebullient-Exuberant-Turbulent Spectrum

The Turbulent scale on the MCMI-IV will provide clinicians with a deeper understanding of the levels of severity found in adult patients who may be experiencing abnormal personality traits, such as a lost sense of reality or unwavering optimism. “Turbulent” refers to the more severe (disorder) end of that spectrum. The MCMI-IV can help you identify:

- how adaptive/maladaptive it is
- how it differentiates itself by virtue of different personality mixtures
- where to begin the intervention

Dr. Ted Millon’s conceptualization of the Ebullient-Exuberant-Turbulent personality pattern:

Typically energetic and buoyant in manner, the Ebullient-Exuberant-Turbulent personality pattern is prone to vigorous pursuits of happiness. While this pattern is similar to the historic psychopathology of “typomania”, which pre-dates the modern bipolar-spectrum disorders, this is a new addition to Millon’s spectra.

The high energy and generally positive attitude of moderated variants of this pattern can show considerable characterologic strengths. However, their tendency to be all things to all people, attempt to maintain resilience regardless of circumstance, and pressure others to respond in-kind does not always bode well. Those with less integrated variations of this pattern may be prone to scatteredness, overstimulation, overanimation, and an inability to maintain balance within their environment which can adversely affect their relationships with others.

The MCMI-IV is designed to diagnose personality disorders and identify underlying clinical issues, and capture a broad range of personality functioning. Used in multiple settings, including clinical and counseling, medical, government, and forensic, the MCMI-IV can help:

- Identify deep, pervasive clinical issues
- Facilitate treatment decisions
- Assess disorders based on DSM-5® and ICD-10 classification systems

A Theoretical Change—Introducing a ‘Spectrum’

Dr. Milon’s Disorders of Personality, Third Edition (Wiley: 2011) more fully analyzed and explained a range of personality dysfunction and function. Dr. Millon’s conceptualization of the Ebullient-Exuberant-Turbulent personality pattern:

- Typically energetic and buoyant in manner, the Ebullient-Exuberant-Turbulent personality pattern is prone to vigorous pursuits of happiness. While this pattern is similar to the historic psychoanalysis of “hypomania”, which pre-dates the modern bipolar-spectrum pattern, this is a new addition to Millon’s spectra.

The high energy and generally positive attitude of moderated variants of this pattern can show considerable characteristic strengths. However, their tendency to be all things to all people, attempt to maintain resilience regardless of circumstance, and pressure others to respond in-kind does not always bode well. Those with less integrated variations of this pattern may be prone to scatteredness, overstimulation, overanimation, and an inability to maintain balance within their environment which can adversely affect their relationships with others.

The New MCMI-IV at a Glance

New Features
- Full normative update, approximately 1,500 adults from outpatient and inpatient clinical settings
- New Turbulent scale, providing deeper understanding of those patients presenting with this unidentified personality type
- New and updated test items characterizing the evolution of Dr. Millon’s personality theory
- Refreshed to increase clarity and clinical relevance
- New and improved narrative content that better integrates results with therapeutic practice
- Updated Groomson Face Scales
- New digital and on-end workbox via Q-global
- Aligned with DSM-5® and ICD-10

Overview
Administrator: Adults aged 18 and older
Administration Time: 25–30 minutes
Scoring and Reporting: Q-global®, Q Local™ and Mail-in
Qualification Level: C
Response Forms: English and Spanish

Introduction to the MCMI-IV
Theodore Millon, PhD, DSc

Despite his humble beginnings as the son of Polish immigrants originally from Russia, Dr. Millon excelled in his collegiate studies of psychology and anthropology. After completing his dissertation in 1953, Dr. Millon began his teaching career at Lehigh University in Pennsylvania. It was during this formative position that he began to explore personality disorders, revolutionizing the assessment treatment continuum, and development of the personality test that would eventually become today’s MCMI-IV.

While touring the Allentown State Hospital with his students, he was appalled with the conditions the patients were forced to endure. He contacted a local politician nursing for state governor who widely publicized the issues at ASH as a platform for his campaign. Once the deplorable conditions of the hospital were exposed, Dr. Millon was placed on the Board of Trustees, and because of his mental health degrees, was quickly voted president of the Board at the age of 26. The Board, led by Dr. Millon, went on to effect improvements over the next decade that would move the hospital’s standings from 22nd out of 22 hospitals in the state to first, vastly due to improvements over the next decade that would move the hospital’s standings.

During the development of the MCMI-IV, Dr. Millon shared his ideas on the importance of “understanding personality disorders” with millions of Americans who will be better understood because of his tests.

Seth Grossman, PsyD

Dr. Grossman is a licensed psychologist in the state of Florida. He is the founder and clinical director of the Center for Psychological Fitness in the Fort Lauderdale region, as well as a member of the clinical faculty at the Florida International University Herbert Wertheim College of Medicine. For nearly two decades, Dr. Grossman worked under the leadership of the world renowned personality theorist, Theodore Millon, co-authoring several books, scientific articles, and personality tests with him.

Dr. Grossman has also been a guest lecturer on personality and clinical assessment at universities and professional settings nationally and internationally.

“...A lasting imprint of Ted will be millions of Americans who will be better understood because of his tests.”

Theodore Millon, PhD, DSc, Seth Grossman, PsyD, Carrie Millon, PhD

The most widely used theory-based adult clinical personality instrument

The MCMI-IV assessment delivers Dr. Millon’s time-tested theories on personality patterns in an all-new spectrum.
New Features
» Full normative update, approximately 1,500 adults from outpatient and inpatient clinical settings
» New Turbulent scale, providing deeper understanding of those patients presenting with unbridled personality type
» New and updated test items characterizing the evolution of Dr. Millon's personality theory
» Refreshed to increase clarity and clinical relevance
» Flaw and improved narrative content that better integrates results with therapeutic practice
» Updated Grossman Face Scales
» New digital and to-end work flow via Q-global
» Aligned with DSM-5 and ICD-10

Overview
Administer to: Adults aged 18 and older
Administration Times: 15-30 minutes
Scoring and Reporting: Q-global®, Q Local®, and Mail-in
Qualification Level: C
Response Forms: English and Spanish

About the Authors
Theodore Millon, PhD, DSc
Despite his humble beginnings as the son of Polish immigrants seeking to arrive during the Depression, Dr. Millon excelled in his college studies of psychology and anthropology. After completing his dissertation in 1953, Dr. Millon began his teaching career at Lehigh University in Pennsylvania. It was during his formative years in this position that he began to question the limits of personality testing’s capacity to assess patients. This led to the development of the Personality Assessment Inventory (PAI) and the MMPI. In 1967, he left Lehigh University to become the first president of the Board at the age of 26. The Board, led by Dr. Millon, went on to effect improvements over the next 25 years that would move the hospital’s standings from 22nd out of 22 hospitals in the state to first, vastly due to his efforts with a much deeper understanding of the patients housed in the chronic wards, going incognito and sleeping in the development of clinical research programs and community mental health centers.

Dr. Millon was placed on the Board of Trustees, and because of his mental health degrees, was quickly voted president of the Board at the age of 24. The Board, led by Dr. Millon, went on to effect improvements over the next decade that would move the hospital’s standings from 22nd out of 22 hospitals in the state to first, vastly due to the development of clinical research programs and community mental health centers.

It was during this time that he immersed himself into the lives of the patients, going incognito and sleeping in the ‘90s with a good portion of his inspiration for understanding the patients housed in the chronic wards, going incognito and sleeping in the development of clinical research programs and community mental health centers.

Dr. Millon went on to write, co-author, and edit more than 30 books, Half a lifetime of social work as Howard University, University of Illinois in Chicago, and the University of Miami and developed a number of personality and psychological assessments widely in use today. His unique, holistic approach to diagnosis and treatment changed the way psychologists think about personality disorders.

During the development of the MCMI-IV, Dr. Millon shared his ideas on the importance of understanding theory and assessment and how they coordinate together to give us the central core of the emergence of the field of personality disorders.
