

# Getting to Know Your Rolling Bag

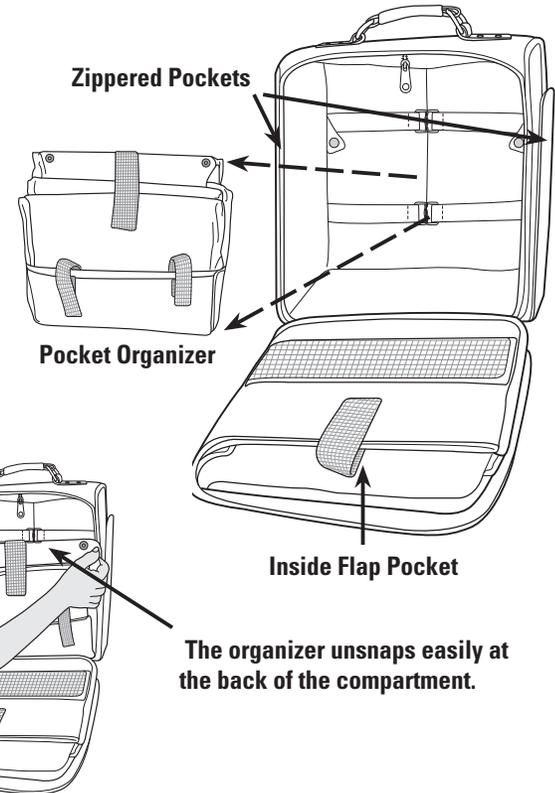

We selected this bag to give you enough room to store your kit and a convenient way to transport it to testing locations. As you explore your bag, you will discover several options for storing kit components.

Every side of the bag's exterior has a zippered pocket. The front flap is a perfect space to hold record forms and response booklets. There are also compartments for pencils, a calculator, and stopwatch.

The main compartment inside the bag has a fabric pocket organizer for storing manuals and stimulus books. However, some larger kits fit more easily if you remove the organizer to create more storage space.

There is a large pocket on the inside of the flap that is another prime storage area for manuals or stimulus books and three more pockets for smaller items.

Pack your bag, pull up the handle, and you're ready to go!
