Why European Rehab Hospitals Use RehaCom®

The German Society of Neurology publishes guidelines regarding treatment of cognitive deficits after stroke, TBI, and other traumas and diseases.

These guidelines provide specific, mandatory guidance for treatment including:

- What kind of treatment the patients are given
- How often the treatment is given
- If the treatment is “deficit-specific”

RehaCom fits these requirements by being:

- Deficit-specific
- Highly repetitive
- Auto-adaptive

RehaCom follows all of these guidelines and requirements, and as a result, is used in nearly all German rehabilitation hospitals.

Why European Therapists Love RehaCom

Therapists can see improved therapy outcomes and overall improvements in the quality of life for their patients using RehaCom.

Additional advantages for therapists include:

- Minimal preparation, simply start the RehaCom software!
- Reduced need to monitor patient during therapy because:
  - The patient is monitored continuously
  - The task difficulty is adapted automatically
  - The course of therapy is recorded automatically
- The results are recorded automatically and printable and saveable in one click, requiring less effort for therapy documentation

Why RehaCom saves Time and Money

Comparing two “typical” therapy sessions:

Therapist's workload without RehaCom:

<table>
<thead>
<tr>
<th></th>
<th>preparation time</th>
<th>therapy time</th>
<th>documentation</th>
<th>total</th>
</tr>
</thead>
<tbody>
<tr>
<td>preparation time</td>
<td>5 min</td>
<td>30 min</td>
<td>10 min</td>
<td>45 min</td>
</tr>
</tbody>
</table>

Therapist's workload with RehaCom:

<table>
<thead>
<tr>
<th></th>
<th>preparation time</th>
<th>therapy time</th>
<th>documentation</th>
<th>total</th>
</tr>
</thead>
<tbody>
<tr>
<td>preparation time</td>
<td>0 min</td>
<td>30 min</td>
<td>5 min</td>
<td>35 min</td>
</tr>
</tbody>
</table>
Therapists save 10 minutes per therapy session with RehaCom. Hospital chains see direct savings in therapists’ time and the associated costs.

Extended Therapy Engagement  Better Results
Patients with cognitive deficiencies are notoriously poor at self-assessment which often leads patients to end their cognitive rehabilitation too soon. RehaCom provides an objective measure of the patient’s status and progress, giving them a better understanding of their own deficits. This improves patient engagement in the therapy process, especially in the post-acute phase. Patients using RehaCom continue their therapy longer, achieving better therapeutic results.

Why Your Marketing Department Will Love RehaCom

• Evidence-based treatment
• Improved quality of life for patients
• Increased patient satisfaction
• Improved hospital reputation
